The Argus view

• One of the world’s leading PRAs, Argus is a team of more than 800 staff members in 21 global offices
• Publishing more than 11,000 daily spot and forward price assessments, plus market intelligence for world commodities markets
• Coverage includes:
  ◦ Energy
  ◦ Fertilizers
  ◦ Petrochemicals
  ◦ Metals
• Services
  ◦ Price reporting and indexation
  ◦ Consulting
  ◦ Conferences
• Indexation examples
  ◦ Crude oil
  ◦ Refined products
  ◦ Natural gas
  ◦ NGLs
  ◦ Environmental markets
Virgina-declines-Mpc-power-plant-CO2-cut

Virginia’s 750-MW coal power plant in Chesterfield County has been announced that the company is making plans to cut CO2 emissions. This is expected to be a major step in the company's efforts to reduce its carbon footprint.

The company has said that the move is part of a broader strategy to transition to cleaner energy sources. The announcement comes as the state of Virginia, like many others, is facing pressure to reduce its greenhouse gas emissions.

The company has also said that the move is expected to have a significant impact on its costs, as it will need to invest in new technologies to reduce emissions.

In a statement, the company said: "We are committed to reducing our carbon footprint and this move is an important step in that direction. We believe it is in the best interests of our customers and the environment, and we are confident that we can achieve this goal in a cost-effective manner.

The company has also said that it will work with its customers to ensure that the transition is as smooth as possible.

The move is expected to be implemented over the next few years.
